

2019 AP Statistics Midterm Exam Topic List

Topic Outline: Following is an outline of the major topics covered on the 2019 AP Statistics Midterm Exam. The ordering here is intended to define the scope of the exam but not necessarily the sequence. The percentages in parentheses for each content area indicate the representation of that topic on the midterm exam.

- I. Exploring Data: Describing patterns and departures from patterns (33% of representation on midterm exam). *Exploratory analysis of data makes use of graphical and numerical techniques to study patterns and departures from patterns. Emphasis should be placed on interpreting information from graphical and numerical displays and summaries.*
 - a. Constructing and interpreting graphical displays of distributions of univariate data (dotplot, stemplot, histogram, cumulative frequency plot)
 - i. Center and spread
 - ii. Clusters and gaps
 - iii. Outliers and other unusual features
 - iv. Shape
 - b. Summarizing distributions of univariate data
 - i. Measuring center: median, mean
 - ii. Measuring spread: range, interquartile range, standard deviation
 - iii. Measuring position: quartiles, percentiles, standardized scores (z-scores)
 - iv. Using boxplots
 - v. The effect of changing units on summary measures
 - c. Comparing distributions of univariate data (dotplots, back-to-back stemplots, parallel boxplots)
 - i. Comparing center and spread: within group, between group variation
 - ii. Comparing clusters and gaps
 - iii. Comparing outliers and other unusual features
 - iv. Comparing shapes
 - d. Exploring bivariate data
 - i. Analyzing patterns in scatterplots
 - ii. Correlation and linearity
 - iii. Least-squares regression line
 - iv. Residual plots, outliers and influential points
 - v. Transformations to achieve linearity: logarithmic and power transformations
 - e. Exploring categorical data
 - i. Frequency tables and bar charts
 - ii. Marginal and joint frequencies for two-way tables
 - iii. Conditional relative frequencies and association
 - iv. Comparing distributions using bar charts

2019 AP Statistics Midterm Exam Topic List

- II. II. Sampling and Experimentation: Planning and conducting a study (33% of representation on midterm exam). *Data must be collected according to a well-developed plan if valid information on a conjecture is to be obtained. This plan includes clarifying the question and deciding upon a method of data collection and analysis.*
- a. Overview of methods of data collection
 - i. Census
 - ii. Sample survey
 - iii. Experiment
 - iv. Observational study
 - b. Planning and conducting surveys
 - i. Characteristics of a well-designed and well-conducted survey
 - ii. Populations, samples and random selection
 - iii. Sources of bias in sampling and surveys
 - iv. Sampling methods, including simple random sampling, stratified random sampling and cluster sampling
 - c. Planning and conducting experiments
 - i. Characteristics of a well-designed and well-conducted experiment
 - ii. Treatments, control groups, experimental units, random assignments and replication
 - iii. Sources of bias and confounding, including placebo effect and blinding
 - iv. Completely randomized design
 - v. Randomized block design, including matched pairs design
 - d. Generalizability of results and types of conclusions that can be drawn from observational studies, experiments and surveys
- III. III. Anticipating Patterns: Exploring random phenomena using probability and simulation (33% of representation on midterm exam). *Probability is the tool used for anticipating what the distribution of data should look like under a given model.*
- a. Probability
 - i. Interpreting probability, including long-run relative frequency interpretation
 - ii. “Law of Large Numbers” concept
 - iii. Addition rule, multiplication rule, conditional probability and independence
 - iv. Discrete random variables and their probability distributions, including binomial and geometric
 - v. Simulation of random behavior and probability distributions
 - vi. Mean (expected value) and standard deviation of a random variable, and linear transformation of a random variable
 - b. Combining independent random variables
 - i. Notion of independence versus dependence
 - ii. Mean and standard deviation for sums and differences of independent random variables

2019 AP Statistics Midterm Exam Topic List

- c. The normal distribution
 - i. Properties of the normal distribution
 - ii. Using tables of the normal distribution
 - iii. The normal distribution as a model for measurements
- d. Sampling distributions
 - i. Sampling distribution of a sample proportion
 - ii. Sampling distribution of a sample mean
 - iii. Central Limit Theorem
 - iv. Sampling distribution of a difference between two independent sample proportions
 - v. Sampling distribution of a difference between two independent sample means
 - vi. Simulation of sampling distributions
 - vii. t-distribution

Textbook Chapters/Sections for 2019 AP Statistics Midterm Exam:

1. Chapters 1 through 7 (pages 1-492) in The Practice of Statistics 6th Edition by Starnes and Tabor.
2. Themes 1, 2, and 3, or, Topics 1 through 10 (pages 39-273) in Barron's AP Statistics 9th Edition by Martin Sternstein
